## EMAIL-abhishm2531997@gmail.com

## **BATCH No-DSNB1222(DATA TRAINED)**

1 What will be the output of the following code snippet?
def func(a, b): return b if a == 0 else func(b % a, a) print(func(30, 75))
a) 10
b) 20
c) 15
d) 0
ANSWER- c) 15
<b>2</b> numbers = (4, 7, 19, 2, 89, 45, 72, 22)
sorted_numbers = sorted(numbers)
even = lambda a: a % 2 == 0
even_numbers = filter(even, sorted_numbers)
<pre>print(type(even_numbers))</pre>
a) Int
b) Filter
c) List
d) Tuple
ANSWER- b) Filter
3) As what datatype are the *args stored, when passed into
a) Tuple
b) List
c) Dictionary
d) none
ANSWER- a) Tuple
<b>4)</b> set1 = {14, 3, 55} set2 = {82, 49, 62} set3={99,22,17}
print(len(set1 + set2 + set3))
a) 105

b) 270

c) 0
d) Error
ANSWER- a) Error
5) What keyword is used in Python to raise exceptions?
a) raise
b) try
c) goto
d) except
ANSWER- a) Raise
<b>6</b> ) Which of the following modules need to be imported to handle date time computations in Python?
a) timedate
b) date
c) datetime
d) time
ANSWER- c) Datetime
7) What will be the output of the following code snippet?
print(4**3 + (7 + 5)**(1 + 1))
a) 248
b) 169
c) 208
d) 233
ANSWER- c) 208
8) Which of the following functions converts date to corresponding time in Python?
a) strptime
b) strftime
c) both a) and b)
d) None
ANSWER- a) Strptime
9) The python tuple is in nature.
a) mutable

b) immutable
c)unchangeable
d) none
ANSWER- b) Immutable
<b>10</b> ) The is a built-in function that returns a range object that consists series of integer numbers, which we can iterate using a for loop.
A. range()
B. set()
C. dictionary{}
D. None of the mentioned above
ANSWER- a) Range
Question 11) Amongst which of the following is a function which does not have any name?
A. Del function
B. Show function
C. Lambda function
D. None of the mentioned above
ANSWER-c) Lamba Function
ANSWER-c) Lamba Function  Question 12 The module Pickle is used to
Question 12 The module Pickle is used to
Question <b>12</b> The module Pickle is used to  A. Serializing Python object structure
Question 12 The module Pickle is used to  A. Serializing Python object structure  B. De-serializing Python object structure
Question 12 The module Pickle is used to  A. Serializing Python object structure  B. De-serializing Python object structure  C. Both A and B
Question 12 The module Pickle is used to  A. Serializing Python object structure  B. De-serializing Python object structure  C. Both A and B  D. None of the mentioned above
Question 12 The module Pickle is used to  A. Serializing Python object structure  B. De-serializing Python object structure  C. Both A and B  D. None of the mentioned above  ANSWER-c) Both A and B  Question 13 Amongst which of the following is / are the method of convert Python objects for
Question 12 The module Pickle is used to  A. Serializing Python object structure  B. De-serializing Python object structure  C. Both A and B  D. None of the mentioned above  ANSWER-c) Both A and B  Question 13 Amongst which of the following is / are the method of convert Python objects for writing data in a binary file?
Question 12 The module Pickle is used to  A. Serializing Python object structure  B. De-serializing Python object structure  C. Both A and B  D. None of the mentioned above  ANSWER-c) Both A and B  Question 13 Amongst which of the following is / are the method of convert Python objects for writing data in a binary file?  A. set() method
Question 12 The module Pickle is used to  A. Serializing Python object structure  B. De-serializing Python object structure  C. Both A and B  D. None of the mentioned above  ANSWER-c) Both A and B  Question 13 Amongst which of the following is / are the method of convert Python objects for writing data in a binary file?  A. set() method  B. dump() method
Question 12 The module Pickle is used to  A. Serializing Python object structure  B. De-serializing Python object structure  C. Both A and B  D. None of the mentioned above  ANSWER-c) Both A and B  Question 13 Amongst which of the following is / are the method of convert Python objects for writing data in a binary file?  A. set() method  B. dump() method  C. load() method
Question 12 The module Pickle is used to  A. Serializing Python object structure  B. De-serializing Python object structure  C. Both A and B  D. None of the mentioned above  ANSWER-c) Both A and B  Question 13 Amongst which of the following is / are the method of convert Python objects for writing data in a binary file?  A. set() method  B. dump() method  C. load() method  D. None of the mentioned above

- B. set() method C. dump() method D. None of the mentioned above ANSWER- a) load() **15**. A text file contains only textual information consisting of \_\_\_\_. A. Alphabets B. Numbers C. Special symbols D. All of the mentioned above ANSWER- d)All of the mentioned above 16 Which Python code could replace the ellipsis (...) below to get the following output? (Select all that apply.) captains = { "Enterprise": "Picard", "Voyager": "Janeway", "Defiant": "Sisko", } Enterprise Picard, Voyager Janeway Defiant Sisko a) for ship, captain in captains.items(): print(ship, captain) b) for ship in captains: print(ship, captains[ship]) c) for ship in captains: print(ship, captains) d) both a and b ANSWER- d) both a and b 17) Which of the following lines of code will create an empty dictionary named captains? a) captains = {dict} b) type(captains)
- ANSWER- d) captains = {}

c) captains.dict()

d) captains = {}

**18**) Now you have your empty dictionary named captains. It's time to add some data! Specifically, you want to add the key-value pairs "Enterprise": "Picard", "Voyager": "Janeway", and "Defiant": "Sisko".

Which of the following code snippets will successfully add these key-value pairs to the existing captains dictionary?

- a) captains{"Enterprise" = "Picard"} captains{"Voyager" = "Janeway"} captains{"Defiant" = "Sisko"}
- b) captains["Enterprise"] = "Picard" captains["Voyager"] = "Janeway" captains["Defiant"] = "Sisko"
- c) captains = { "Enterprise": "Picard", "Voyager": "Janeway", "Defiant": "Sisko", }

d) None of the above

ANSWER- c) captains = { "Enterprise": "Picard", "Voyager": "Janeway", "Defiant": "Sisko", }

**19** ) You're really building out the Federation Starfleet now! Here's what you have: captains = { "Enterprise": "Picard", "Voyager": "Janeway", "Defiant": "Sisko", "Discovery": "unknown", }

Now, say you want to display the ship and captain names contained in the dictionary, but you also want to provide some additional context. How could you do it?

- a) for item in captains.items(): print(f"The [ship] is captained by [captain].")
- b) for ship, captain in captains.items(): print(f"The {ship} is captained by {captain}.")
- c) for captain, ship in captains.items(): print(f"The {ship} is captained by {captain}.")
- d) All are correct

ANSWER- b) for ship, captain in captains.items(): print(f"The {ship} is captained by {captain}.")

- **20**) You've created a dictionary, added data, checked for the existence of keys, and iterated over it with a for loop. Now you're ready to delete a key from this dictionary: captains = { "Enterprise": "Picard", "Voyager": "Janeway", "Defiant": "Sisko", "Discovery": "unknown", } What statement will remove the entry for the key "Discovery"?
- a) del captains
- b) captains.remove()
- c) del captains["Discovery"]
- d) captains["Discovery"].pop()

ANSWER- c) del captains["Discovery"]
